Foodtruck

Burger

Our foodtruck, food trailer, car shop, office on wheels, vehicle training or display is created on the lowest version of the chassis, which enables a better one display of goods for the customer. The body is made of insulated sandwich panels of the type white polyester sandwich. We strengthen the entire structure with aluminum profiles they additionally stiffen and secure the building. This type of technology is characterized by low tare weight, which allows more efficient distribution of goods in accordance with applicable regulations. All our vehicles pass quality controls and meet them sanitary requirements in force in Poland and the European Union.

We make buildings and their interiors according to the individual needs of the client.

Przykładowe elementy wyposażenia:

- gas installation
- interior spotlights
- individual selection of gas and electric equipment
- efficient eight-stage hood with a mechanical extraction, fat drainer and lighting,
